### **DETAILED ACTION**

Claims 1-21 are currently pending.

Due to the nonstatutory nature of claim 17 as a "use claim" it is not included in the below lack of unity requirement.

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-12, drawn to a method of making a device comprising an immobilized pattern of analyte-binding molecules.

Group II, claim(s) 13-15, drawn to a method of screening an analyte.

Group III, claim(s) 16, drawn to a device made by Group I method.

Group IV, claim(s) 18-21, drawn to a method of making a device comprising a plurality of analyte binding molecules.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Groups I-III do not share a common special technical feature since devices comprising patterns of analyte binding molecules was known in the prior art. See Search Report and citations therein to Winkler and Manns patents; and see newly cited Kramer et al. US Pat. No. 4,689,310. The methods of Group I and IV lack a common special technical feature since these methods are directed to different objectives, comprise different methods steps (e.g. patterns v. arrays: e.g. analyte binding molecules v. array members) and require different and separately burdensome searches.

### **Election of Species ( Groups I, II and IV)**

This application contains claims directed to more than one species of the generic invention (e.g. "analyte binding molecules" (see claim 11); type of assay (see claim 14) "array members" (see specification pages 18-19) . These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1; and are drawn to compounds of diverse structure (e.g nucleotide/peptides) or different types of assays (hybridization/immunoassay) which require different classifications and separately burdensome manual/computer searches.

Applicant is required, in reply to this action, to elect a single species (e.g. a single compound or a single type of assay) to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
